TRAINING PROGRAMS

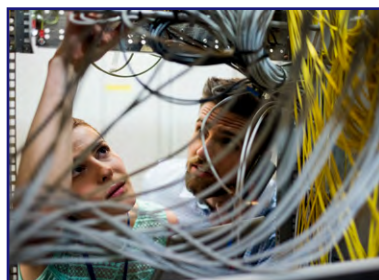

CABLING/LOW VOLTAGE TRAINING

The Global Community Training program covers copper cabling and wireless communications. This program offers premises cabling which refers to building and campus cabling that is generally customer-owned and used

for local area networks of computers (LANs), security systems (CCTV and alarms), building management systems, distributed antenna systems (DAS for cellular and WiFi) and other applications inside buildings or on a campus.

This program is designed to offer basic training in premises cabling to anyone just starting in telecommunications wiring or fiber optics and improve the skill level of the individual with some experience. It is strictly a practical course, not intended to try to teach the theory. We emphasize the practical aspects of copper and fiber optic networks and cable plant design, installation, test, and troubleshooting. We cover how wireless fits in the communications requirements of typical networks and how it is supported by copper and fiber cabling. We teach the basics and provide hands-on and real world exercises to develop installation skills. We also offer Telecom Customer Support and Audio/Video Technician programs.

TRAINING PROGRAMS

COMMERCIAL DRIVERS LICENSE

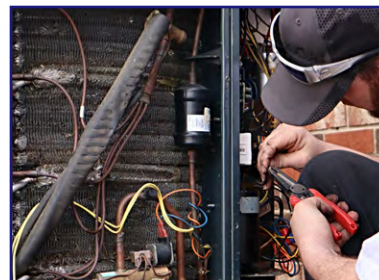

If you're looking for a change in career, more job security and better pay, then getting a Commercial Driver's License (CDL) might be the perfect choice for you. You will begin by taking our in-depth training course, in which you'll learn

all about the best procedures for driving a Class A truck. Our CDL classes prepare you for the exam through Classroom Instruction to prepare you for the written portion of your exam with classroom training on how to safely and expertly drive a truck as well as field instruction where we work with you closely as you learn, and will put in the time necessary to help you pass your exam with ease.

HEATING AND AIR CONDITION

The Heating, Ventilation & Air Conditioning (HVAC) program is offered to prepare you for entry-level employment as HVAC technicians. The purpose of this program is to provide students with a foundation of knowledge and technically oriented experiences in the application of technology systems. Our HVAC training program prepares students to install and service residential and light commercial air conditioning and heating systems.

TRAINING PROGRAMS

WELDING

This program allows students to develop theoretical knowledge and practical skills in the field of industrial welding. Students will be trained to obtain the necessary knowledge and skills to handle specialized equipment used to perform

different joints and welding processes, such as weld aluminum, stainless steel, calamine, and others. The Welding Program also includes welding development application, operation of Oxy-Acetylene welding and other shielding gases, in addition to shielded metal arc welding processes. You will also learn the safety rules and first aid procedures required for this trade, and will be able to establish your own business.

CERTIFIED NURSING ASSISTANT

This program offers a hands on course for those interested in preparing for the Florida Certified Nursing Assistant Exam. You will receive written material and valuable instruction via discussions, as well as hands on training performing all 21 skills the Board of Nursing requires you to know. We also believe that hands on training in a stress free, respectful, and friendly environment will be the key to your success.
